

making work easy

Press release

Hilzingen, Germany – January 2025

A history connecting people and creating the future

Renfert turns 100 – and we all join in the celebrations!

It all began in 1925 - with an idea, two brothers and a good dose of drive. Today, a century later, Renfert is more than just a name. The company based in Hilzingen on Lake Constance is a leading manufacturer of high-quality equipment and materials for dental technology and dentistry and has become an integral part of everyday life in many laboratories and dental offices around the world.

In the course of a century, there have been many changes at Renfert - yet, there is one thing that has remained the same: The commitment to developing solutions making the difference. "Making work easy - is our promise. It means making work in the dental laboratory and in the dental practice more convenient, without compromising on quality and reliability," emphasizes Renfert CEO Sören Hug. "The fact that we can celebrate our anniversary in the IDS year 2025 is a perfect coincidence. And we will seize this opportunity to surprise our customers with some exciting new products."

For Renfert, this special moment is primarily an opportunity to say thank you. Our thanks go to the people behind the products - to the employees who create with passion and expertise, to the customers who trust Renfert in their everyday lives and to the partners who accompany us on this journey.

In the anniversary year, Renfert offers a special promotion as a sign of appreciation: customers who buy and register a Renfert device in 2025 will receive an additional year's guarantee - a simple gesture of gratitude for the people who support Renfert every day.
